DataLink by Choice
For our larger partners, CAMP also can provide the ability to perform API calls directly from your platform via Datalink by Choice. Imagine the power of your platform with CAMP, and the possibilities are endless.

Smarter Alert System
Never be surprised again by your usage. CAMP allows you to create push alerts based on usage thresholds that *you* set up. Alerts can even be sent along to your *customers,* offering your business the transparency for successful engagements.

The Most Detailed Usage in the Industry
Every line's usage is displayed for the current billing cycle, the daily total usage, even down to each transmission session with time/date. So if you spot a day with irregular usage, you simply click on that date and see the usage by each session that day with the transmission time. Experience to power of having unparalleled visibility!

Subscriber/Device Name & Grouping
Say goodbye to having to do a mental match game to associate strings of numbers with your devices. In CAMP, you can add a 100-character Subscriber/Device Name that will help identify where and to whom the unit is deployed Lines can also assign to a Group Name so you can pull reports on usage to bill your customers. CAMP Intuitive Search technology operates as soon as you type a couple of characters the line in question is brought up, so you can immediately act on it or use it to pull reporting..

Exportable: Get the Data You Want
CAMP's entire platform and every piece off data is also exportable in CSV or Excel formats.

Custom Plans for Error Free Provisioning
No more wading through hundreds of plans to find the right one to fit your solution. Our Solution Consultants evaluate your needs and provision only the plans with the features you need on your account. Features can be set up as automatic, so you don't have to choose them every time, or as selectable optional features. Eliminate costly mistakes and make activating a simple process.

Tickets
All tickets use every available API and are integrated into CAMP...so if you need to perform a SIM Swap, Phone Number Change, Suspend or Restore at 4am on a Sunday morning, you have the power to get it done in a second!
The CAMP Ticketing System lets you pick a future execution date, so set it and forget it! CAMP does the rest for you. CAMP will send an email reminder the day before ticket execution in case business conditions have changed.

CRM Tools
Organize all your notes, ticket comments, subscriber and group name within the portal by using CRM Tools we embedded in the CAMP Platform.

IoT Insight
IoT Insight is a new revolutionary feature that provides everything about your IoT device in real-time: Line Status, Network Provisioning, Technologies Supported, Device Specs...crucial information that makes your IoT deployments hum with efficiency.

Portable: Mobile-Ready with CAMP to Go
Business moves at lightning speed and so should you! Access CAMP and do all the above of your mobile phone, tablet or computer from anywhere and anytime.
